Education

National Institute of Technology, Hamirpur

2024-2028

Bachelor of Technology in Computer Science and Engineering

8.2

Technical Skills

- Programming Languages: **TypeScript / Go / C++ / JavaScript / Solidity**
- Backend Development: **REST API Design, Server-side Development (Go, TypeScript)**
- Web Technologies: **HTML / CSS / JavaScript / React.js / Node.js / Next.js**
- Data Structures & Algorithms: **Problem Solving, Competitive Programming**
- Databases & Caching: **PostgreSQL / MySQL / MongoDB**
- Blockchain Development: **Ethereum, Smart Contracts, Solidity**
- Core CS Concepts: **Object-Oriented Programming, DBMS**
- Operating Systems: **Arch Linux, Windows**
- Developer Tools: **Git, GitHub**
- Soft Skills: **Strategic Problem Solving, Clear Communication, Event Management, Public Relations, Mentorship**

Experience

Volunteer

Technical Club

.EXE Technical Club, NIT Hamirpur

January 2025 – Present

- * Contributed to the club's success in winning **Best Technical Club at Nimbus 2025** through active involvement in events.
- * Assisted in building a **Smart Parking System** prototype, focusing on real-time slot tracking and efficient space utilization.

Open Source Contributor

Remote

Creative Scala (GSoC Contribution Period)

Mar 2025 – May 2025

- * Contributed **2 merged PRs** to the Scala/Terminus codebase during the Google Summer of Code contribution period.
- * Implemented cursor movement using **ANSI escape codes**, exposing `left()` and `right()` methods in public APIs.
- * Added terminal dimension support for the **xterm.js backend**, enabling dynamic resizing and layout handling.
- * Wrote unit tests to ensure correctness, maintaining full test coverage and API consistency.

Open Source Contributor

Hacktoberfest

Various Projects (Go, Solidity)

October 2024

- * Tech Stack: **Golang / Bubble Tea TUI / Git Internals / Solidity / Hardhat / Foundry**
- * Merged 5 pull requests; implemented a status notification system for a Git TUI using **Bubble Tea's timer system**, providing real-time feedback and summaries during branch migrations.
- * Engineered a **version history retrieval system** for blockchain contracts with pagination support, optimizing data retrieval for both Foundry and Hardhat environments.
- * Contributed +700 lines of code to **SignVault** for template data structures, improving the organization and retrieval of metadata.

Projects

OneRWA Marketplace

OneChain Testnet — Next.js, React, Move, Chakra UI

GitHub Repository

- * Built a **decentralized marketplace** for tokenized real-world assets with fractional ownership on OneChain (Sui-based).
- * Developed **Move smart contracts** for PropertyNFT creation, fractionalization, and investment tracking.
- * Integrated **OneWallet** for secure transactions, pricing logic, and a responsive portfolio dashboard.
- * Deployed on testnet with IPFS-backed metadata and low transaction costs (approximately 0.01 OCT per transaction).

Flow Fantasy Fusion

Flow Testnet — Cadence, React, Tailwind CSS, Gemini AI

GitHub Repository

- * Developed an **AI-powered fantasy sports dApp** on Flow with automated settlements and multi-asset staking.
- * Implemented **three Cadence smart contracts** for league management, scoring logic, and payout distribution (60/25/15 split).
- * Integrated **Gemini AI with rule-based systems** for lineup recommendations and Forte Actions for workflow automation.
- * Deployed end-to-end testnet flow with a real-time user dashboard.

IP Whisperer

Story Protocol Testnet — Telegraf.js, Story SDK, OpenAI

GitHub Repository

- * Built an **autonomous Telegram-based AI agent** for IP registration, infringement detection, and enforcement on Story Protocol.
- * Implemented IP minting with licenses, IPFS metadata storage, and periodic semantic scans using TF-IDF techniques.
- * Used **Crossmint abstraction** for simplified interactions and OpenAI for automated enforcement messaging.
- * Enabled live testnet IP monitoring with one-click alerts and dispute initiation.

AI Resume Screening Platform

React, Express.js, n8n, Gemini API, JotForm

GitHub Repository

- * Developed an **AI-driven recruitment platform** for instant resume screening using ATS-style scoring and no-code automation.
- * Integrated **n8n workflows** to automate resume parsing, AI evaluation, email notifications, and Slack or Discord alerts.
- * Reduced manual screening effort by **70 percent**, significantly improving recruiter decision-making speed.

Achievements

- * **Won 7+ hackathons and participated in 20+ hackathons**, including multiple Web3 hackathons on Devpost, DoraHacks, and HackQuest.
- * **Winner (1st Place)** at **Forte Hacks by Flow** (Build with Disney, Dune, and Dapper), awarded **USD 5,000** for building a top Dapper NFT experience with real-world utility. [Proof]
- * **Winner (1st Place)** at the **MetaMask Card Dev Cook-Off** for building composable cross-chain applications; awarded **USD 3,000**. [Proof]
- * **Winner across two tracks** at the **MetaMask Embedded Wallets & Solana Dev Cook-Off** for projects in Tokenization of Real-World Assets and Digital Identity; earned **USD 500** and an additional **USD 75** for Best Social Media Presence (team). [Proof]
- * **Top 8 Teams** at **ONE HACK 2025**, winning **USD 300 (team prize)** and a **USD 1,000 development grant**. [Proof]
- * Secured **3rd Place** at **Hack for Hope**, receiving a NordVPN premium pass. [Proof]
- * Achieved **4th Position** at **PortXFolio Hackathon**, awarded AOPS coupons and a premium **.xyz domain**. [Proof]
- * Winner at **HackEMinds 2025**, receiving an **XYZ domain** and **NordVPN bundle**. [Proof]
- * Solved **700+ Data Structures and Algorithms problems** across Codeforces, LeetCode, CodeChef, and AtCoder. [Proof]

Positions of Responsibility / Volunteering

- * Executive Member at **Computer Science Club (.EXE) : NIT Hamirpur**
